

ProHactive – Project Brief for Development Agent

Project Vision

ProHactive is a productivity-focused web application designed around proactive time management. Unlike traditional to-do list applications, the core experience centers on building a realistic daily schedule through time-blocking. The system should help users decide what to do, when to do it, and how to adapt when plans change.

Target User

Individual users who want structure, focus, and accountability in their daily work and study routines. The initial MVP is not intended for teams or enterprise collaboration.

Core Product Philosophy

Tasks are not the primary object. Time blocks are. Every task should eventually occupy a place on the user's schedule. The application should encourage intentional planning rather than maintaining long unmanaged task lists.

MVP Features

1. Task creation and management. 2. Daily schedule view. 3. Drag-and-drop time blocking. 4. Task prioritization. 5. Completed task tracking. 6. Local persistence and/or backend persistence. 7. Responsive PWA experience.

Architecture Direction

Frontend and scheduling logic should remain separated. Frontend Layer: - React - TypeScript - Zustand for state management - Responsive UI - PWA support Scheduling Engine: - Independent scheduling service/module - Receives tasks and constraints - Produces schedule recommendations - Can evolve into an AI-assisted planning engine later

MVP Screens

1. Dashboard/Home 2. Daily Planner 3. Task Management 4. Schedule Review 5. Settings

Post-MVP Roadmap

- Intelligent schedule optimization - AI-assisted task prioritization - Focus sessions - Habit tracking - Calendar integrations - Analytics and productivity insights - Cross-device synchronization - Mobile applications

Technical Expectations

- Clean component architecture - Feature-based folder structure - Reusable UI components - Strong TypeScript typing - Scalable state management - Testable business logic - API-ready architecture

Success Criteria

The MVP should allow a user to: - Create tasks - Prioritize tasks - Allocate tasks into time blocks - View an organized daily schedule - Adjust plans quickly when circumstances change
